As a developer, your task is to create a nested reply system with the following functionalities:

1. At the beginning of the thread, there should be a "Reply Box" section.
   ○ It should contain a textarea where users can enter their replies.
   ○ It should have a "Post" button to submit the reply.
2. Each reply in the thread should have the following elements:
   ○ Content: The text content of the reply.
   ○ Likes: A counter indicating the number of likes for that reply.
   ○ Like Button: Clicking this button should increase the number of likes for the corresponding reply.
   ○ Reply Button: Clicking this button should open a nested reply box to add a reply to that specific reply.
   ○ Delete Button: Clicking this button should delete the entire chain of replies under that reply.
3. Nested Replies:
   ○ When the "Reply" button is clicked for a particular reply, a nested reply box should appear below that reply.
   ○ The nested reply box should have a textarea for users to enter their replies and a "Post" button to submit the nested reply.
   ○ The nested reply should be displayed below the parent reply in a nested format, indicating the reply chain.
4. Deleting Replies:
   ○ Clicking the "Delete" button for a reply should remove that reply and all its nested replies from the thread.

Your task is to implement the necessary HTML, CSS, and JavaScript code to achieve the desired functionality, including the nested reply chain.
